Content Pane

- A JFrame has several "panes".

Frame

Menu Bar

Glass Pane

Root Pane
Layered Pane
Content Pane

http://docs.oracle.com/javase/tutorial/uiswing/components/toplevel.html
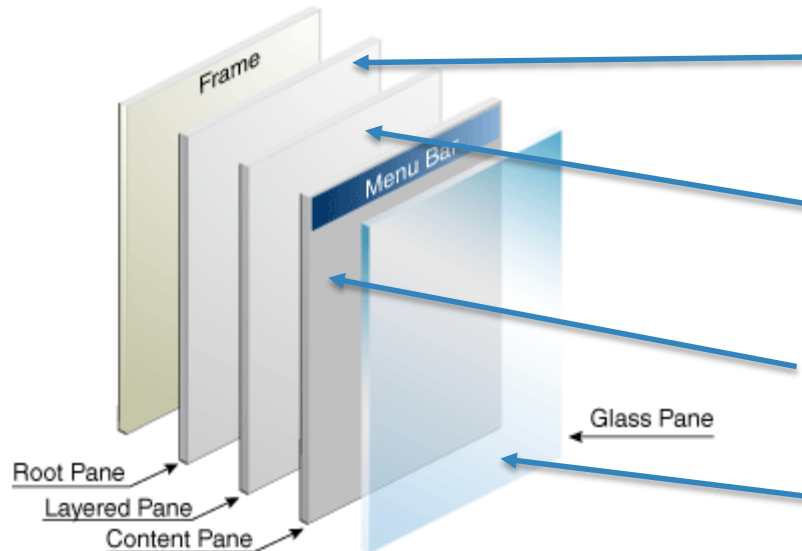

Root pane: contains/manages the other panes

Layered pane: contains the content pane and can hold a menu bar and other overlapping components

Content pane: where all the visible components except the menu bar typically go. This is the only pane we care about.

Glass pane: typically transparent, but can intercept mouse clicks

- All we really care about, however, is:

We add components here. JFrame `add()` method puts them here by default.

(not an inheritance tree)

```
JFrame
```

ContentPane

Menu Bar
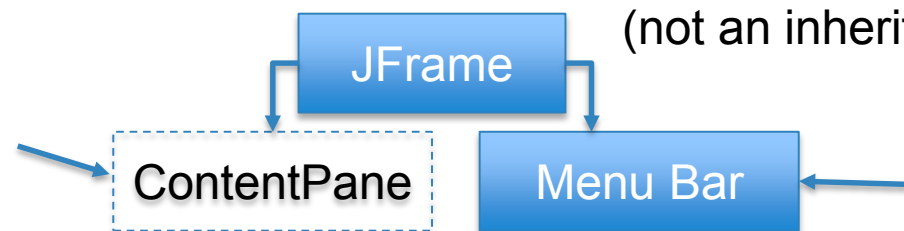

We'll look at this next time… maybe?
